November Community Update

Chipotle Fundraiser

Our team held an evening fundraiser at Chipotle Mexican Grill. We raised \$230 and many families from the community attended. Overall, it seemed like everyone had a great time enjoying a great meal with their friends and family.

What did we do in November?

Website - Almost finished creating our brand new website! It should launch a few weeks into January

CAD - Training new members to make various parts and assemblies

Fundraising - Hosted the Chipotle Fundraiser! Part of the proceeds came directly to our team.

Software - Explored a new user-friendly dashboard, "Shuffleboard." Worked on creating a "Puppy-bot" program, still working on finishing it.

3D Printing - Trained new members on printers and printed a few test parts

Electrical - Built a robot battery cart to easily charge and transport batteries.

Registration - All students are officially registered!

Manufacturing - Re-trained all of their members on all of the common machinery in the shop. This would include the chop saw, table saw, disc sander, and other machines.

Safety - Gave a presentation to the team. Many team members found the presentation very helpful and useful when working with dangerous equipment.
